Vehicle Identity & Registration

SECTION 1 — GENERAL INFORMATION

Vehicle Details	
Registration Number	AB12CDE
Make	BMW
Model	320D
Colour	BLACK
Year of Manufacture	2019
Date of First Registration	2019-03
Vehicle Type	Car
Wheelplan	2 AXLE RIGID BODY
Type Approval	M1
Revenue Weight	N/A
Date of Last V5C Issued	2023-06-12

Data Source: Driver and Vehicle Licensing Agency (DVLA) — Vehicle Enquiry Service (VES). This data is sourced directly from the official UK Government database and is accurate as of the date of this report.

Documentation & Identification Review

SECTION 2 — DOCUMENT VERIFICATION

A thorough documentation review is an essential step in assessing the provenance and legitimacy of any used vehicle. The following key documents and identifiers should be verified before completing a purchase.

V5C Registration Certificate (Logbook)

The V5C is the most important document associated with a vehicle. It records the registered keeper (not necessarily the legal owner) and contains key details including the VIN, engine number, colour, and date of first registration. The current V5C format has multiple security features including a watermark, colour-coded sections, and a unique document reference number.

Key checks: Ensure the V5C document reference number matches DVLA records, the registered keeper details match the seller, and there are no signs of tampering or alteration. A vehicle without a V5C should be treated with extreme caution.

Vehicle Identification Number (VIN)

The VIN is a unique 17-character code assigned during manufacture. It can typically be found on the dashboard (visible through the windscreen), on a plate in the driver's door frame, and stamped into the chassis. The VIN on the vehicle must match the VIN recorded on the V5C and the DVLA database. Any discrepancy may indicate the vehicle has been cloned or its identity altered.

Service History

A full service history demonstrates that the vehicle has been maintained according to the manufacturer's recommended schedule. Service records may be in the form of a stamped service book, digital service records (maintained by the manufacturer's dealer network), or individual invoices from independent garages. Gaps in service history may indicate periods of neglected maintenance.

Number of Previous Keepers

V5C Issued Date: 2023-06-12

The date the most recent V5C was issued can indicate a recent change of keeper. Multiple V5C re-issues in a short period may warrant further investigation.

Structural & Accident Assessment

SECTION 3 — PHYSICAL ASSESSMENT GUIDE

A thorough structural assessment evaluates the integrity of the vehicle's chassis, body panels, subframes, and structural reinforcement components. Modern vehicles are designed with crumple zones, side impact protection beams, and reinforced passenger cells that are engineered to absorb energy during a collision and protect occupants.

Signs of previous structural repair may include: inconsistent panel gaps, mismatched paint finishes or overspray, welding marks on structural components, rippled or uneven surfaces on inner panels, and replaced chassis identification plates. These indicators suggest the vehicle may have sustained significant impact damage at some point in its history.

If structural damage is suspected, it is recommended to have the vehicle inspected by a qualified vehicle engineer or through an independent inspection service such as the AA, RAC, or a member of the Institute of the Motor Industry (IMI). A professional inspection can identify hidden damage that may affect the vehicle's safety and roadworthiness.

Structural Inspection Checklist

INSPECTION AREA	WHAT TO LOOK FOR
Panel alignment and gaps	All panels should be evenly spaced and aligned.
Paint condition	Look for colour variations, overspray on rubber seals, or fresh paint in the engine bay.
Underbody inspection	Check for signs of welding, patches, or replaced sections on chassis rails.
Boot floor and spare wheel well	Inspect for wrinkles, fresh underseal, or replaced sections.
Suspension mounting points	Ensure no distortion or cracking around strut towers and subframe mounts.

Recommendation: If structural damage is suspected, commission an independent vehicle inspection through the AA, RAC, or an IMI-accredited engineer before purchase.

Vehicle History Status Overview

SECTION 4 — AT A GLANCE

The following summary provides a quick overview of the key checks performed on vehicle **AB12CDE**. Detailed information for each check is provided in the subsequent sections of this report.

-  MOT Status: **Valid** — Expires 2025-09-15
-  Tax Status: **Taxed** — Due 2025-03-01
-  Insurance: **CHECK RECOMMENDED** — Verify via askMID
-  Stolen Check: **NO RECORD FOUND**
-  Finance Check: **VERIFICATION RECOMMENDED**
-  Write-Off Check: **VERIFICATION RECOMMENDED**
-  Export Marker: **NOT MARKED**
-  Last Recorded Mileage: **67,432 miles** (as of last MOT)

Note: Items marked with **VERIFICATION RECOMMENDED** require verification through an accredited provider for definitive results. This report uses publicly available data and templated assessments where live data is not available.

Tax & MOT Status

SECTION 5 — CURRENT STANDING

VEHICLE TAX INFORMATION

Tax Status	TAXED
Tax Due Date	2025-03-01

MOT INFORMATION

MOT Status	VALID
MOT Expiry Date	2025-09-15
Total MOT Tests	6
Tests Passed	5
Tests Failed	1
Pass Rate	83%

All vehicles over 3 years old in the UK require an annual MOT test to ensure they meet the minimum road safety and environmental standards set by the Driver and Vehicle Standards Agency (DVSA). Driving without a valid MOT is an offence under the Road Traffic Act 1988 and can result in a fine of up to £1,000.

Vehicle Excise Duty (road tax) must be paid for all vehicles used or kept on public roads. The tax rate is determined by the vehicle's CO2 emissions (for vehicles registered after April 2017) or engine size (for older vehicles). Untaxed vehicles on public roads may be clamped, impounded, or destroyed.

Data Source: DVLA Vehicle Enquiry Service (VES) and DVSA MOT History API.

Engine & Performance Data

SECTION 6 — POWERTRAIN SPECIFICATION

ENGINE SPECIFICATION	
Fuel Type	DIESEL
Engine Capacity	1995 cc
Euro Emission Standard	EURO 6
CO ₂ Emissions	117 g/km
Real Driving Emissions	RDE2

Engine Overview

The BMW 320D is equipped with a 1995cc diesel engine meeting EURO 6 emission standards. Diesel engines offer superior fuel economy and torque but may be subject to additional charges in Ultra Low Emission Zones (ULEZ) unless they meet Euro 6 standards.

Performance Considerations

When assessing engine condition, key indicators include smooth idling, responsive throttle, absence of excessive exhaust smoke, and stable oil pressure. The MOT advisory history (detailed later in this report) may reveal engine-related concerns identified during previous inspections.

Data Source: DVLA Vehicle Enquiry Service (VES) — official government database.

Environmental & Emissions Report

SECTION 7 — ENVIRONMENTAL IMPACT

EMISSIONS DATA	
CO ₂ Emissions	117 g/km
CO ₂ Band	Band F (111-130 g/km)
Euro Standard	EURO 6
Real Driving Emissions	RDE2
Fuel Type	DIESEL
ULEZ Compliance	YES – MEETS ULEZ STANDARDS

Clean Air Zones (CAZ)

Several UK cities have implemented or are planning Clean Air Zones where vehicles that do not meet minimum emission standards are charged a daily fee. Cities with active CAZs include Birmingham, Bath, Bradford, Bristol, Portsmouth, and London (ULEZ). Before purchasing this vehicle, check compatibility with your local Clean Air Zone requirements.

You can check Clean Air Zone charges for this vehicle at:

<https://www.gov.uk/clean-air-zones>

Note: ULEZ compliance is estimated based on the Euro emission standard recorded by the DVLA. For definitive ULEZ compliance, check at tfl.gov.uk/ulez.

Running Costs & Tax Analysis

SECTION 8 — OWNERSHIP COSTS

TAX & RUNNING COST SUMMARY	
Current Tax Status	TAXED
Tax Due Date	2025-03-01
Estimated Annual Tax (VED)	£190 - £270
Fuel Type	DIESEL
Engine Capacity	1995 cc

Estimated Ownership Costs

The total cost of ownership includes Vehicle Excise Duty (road tax), insurance, fuel, maintenance, and depreciation. For the BMW 320D, the primary recurring costs to consider are:

COST CATEGORY	GUIDANCE
Annual Road Tax (VED)	£190 - £270
Insurance	Varies by driver profile — obtain quotes from comparison sites
Servicing	Follow manufacturer service intervals — budget £200-£600/year
MOT	Maximum fee: £54.85 (car) — required annually after 3 years
Tyres	Replacement when below 1.6mm tread — budget £60-£200 per tyre

Tip: Use the government's vehicle tax checker at <https://www.gov.uk/check-vehicle-tax> for the exact VED rate for this vehicle.

Insurance Verification

SECTION 9 — MOTOR INSURANCE CHECK

Insurance Status: **CHECK RECOMMENDED**

Insurance status should be verified through the official Motor Insurers' Bureau (MIB) database. The askMID service allows vehicle owners and prospective buyers to confirm whether a vehicle is currently insured for road use in the United Kingdom.

How to Verify Insurance Status

1. Visit <https://ownvehicle.askmid.com/>
2. Enter the registration number: AB12CDE
3. Complete the verification process
4. The system will confirm if the vehicle appears on the Motor Insurance Database (MID)

Legal Requirements

Under the Continuous Insurance Enforcement (CIE) scheme, it is a legal requirement for all registered vehicles in the UK to be insured unless a Statutory Off Road Notification (SORN) has been declared. Driving without valid insurance is an offence under Section 143 of the Road Traffic Act 1988.

About the Motor Insurance Database (MID)

The Motor Insurance Database (MID) is managed by the Motor Insurers' Bureau (MIB) and contains details of every insured vehicle in the UK. It is used by the Police and the DVLA to identify uninsured vehicles through Automatic Number Plate Recognition (ANPR) cameras. If your vehicle is not on the MID, you may receive a warning letter, a fixed penalty of £100, or have your vehicle seized and destroyed.

Verify at: <https://ownvehicle.askmid.com/>

Provider: Motor Insurers' Bureau (MIB)

Stolen Vehicle Check

SECTION 10 — THEFT RECORD CHECK

 Status: **NO RECORD FOUND**

A stolen vehicle check has been conducted for vehicle registration AB12CDE. Based on publicly accessible records available at the time of this report, no record of this vehicle being reported as stolen has been identified on the Police National Computer (PNC).

The Police National Computer is maintained by the UK's law enforcement agencies and contains records of all vehicles reported stolen across England, Wales, Scotland, and Northern Ireland. This check searches against the PNC database to identify whether the vehicle has been flagged.

Please note: This check reflects data available at the time of the report. If you have concerns about the provenance of a vehicle, we recommend contacting your local police force directly or requesting a check through an accredited data provider such as HPI, Experian AutoCheck, or the RAC.

Disclaimer: This report provides information based on publicly available data sources. It does not constitute a guarantee that the vehicle has never been stolen. A comprehensive stolen vehicle check through a licensed provider is recommended for complete assurance.

Outstanding Finance Check

SECTION 11 — FINANCE STATUS

Status: **VERIFICATION RECOMMENDED**

An outstanding finance check provides information on whether vehicle AB12CDE has any existing hire purchase (HP), personal contract purchase (PCP), lease agreement, or other form of secured lending registered against it.

When a vehicle is purchased on finance, the finance company retains legal ownership until the full balance is repaid. If you purchase a vehicle with outstanding finance, the finance company may have the legal right to repossess the vehicle, even if you were unaware of the debt at the time of purchase. Under the Hire Purchase Act 1964, a private buyer who purchases a vehicle in good faith from a dealer may receive good title, but this protection is limited.

We strongly recommend verifying the finance status of this vehicle through an accredited provider such as HPI, Experian, or the Finance & Leasing Association (FLA). These providers have direct access to the financial records and can provide a definitive answer.

How to Verify Finance Status

1. Request a finance check through HPI ([hpicheck.com](https://www.hpicheck.com))
2. Use Experian AutoCheck for comprehensive data
3. Ask the seller to provide proof of settlement if finance was previously held
4. Check the V5C (logbook) — the registered keeper should match the seller

Disclaimer: This report does not include a live outstanding finance check. The information provided is general guidance. A paid finance check through an accredited provider is the only way to confirm the vehicle's finance status with certainty.

Insurance Write-Off Check

SECTION 12 — WRITE-OFF CATEGORIES

 Status: **VERIFICATION RECOMMENDED**

An insurance write-off check determines whether vehicle AB12CDE has ever been declared a total loss by an insurance company. When the cost of repairing a vehicle exceeds a certain percentage of its market value, the insurer may 'write off' the vehicle.

Since October 2017, the UK adopted new write-off categories (A, B, S, N) replacing the older categories (A, B, C, D). Category S and N vehicles can be legally repaired and resold, but their value is typically significantly lower than equivalent non-written-off vehicles.

A vehicle's write-off history is recorded on the Claims and Underwriting Exchange (CUE) database, managed by the Insurance Fraud Bureau. This data is available through accredited providers.

UK Write-Off Categories

Category A (Scrap)

The vehicle must be crushed. It cannot be repaired or returned to the road under any circumstances. Even salvageable parts may not be resold.

Category B (Body Shell)

The body shell must be crushed, but individual parts may be salvaged and resold. The vehicle itself cannot be rebuilt or re-registered for road use.

Category S (Structural)

The vehicle has sustained structural damage (e.g., chassis, frame, or crumple zones). It can be repaired and returned to the road but must pass a vehicle inspection. Previously known as Category C.

Category N (Non-Structural)

The vehicle has sustained non-structural damage (e.g., cosmetic, electrical, or mechanical). It can be repaired and returned to the road. Previously known as Category D.

Disclaimer: This report does not include a live insurance write-off check. To confirm whether this vehicle has been written off, use an accredited data provider such as HPI, Experian AutoCheck, or the AA.

Mileage History & Analysis

SECTION 13 — ODOMETER READINGS

DATE	MILEAGE	MILES SINCE PREVIOUS
2020-09-05	15,200 mi	—
2021-09-10	28,300 mi	13,100 mi
2022-09-15	41,005 mi	12,705 mi
2022-09-20	41,020 mi	15 mi
2023-09-08	54,210 mi	13,190 mi
2024-09-12	67,432 mi	13,222 mi

Mileage readings are recorded at each MOT test. The average UK car covers approximately 7,000–10,000 miles per year. Significant deviations from this average, or mileage readings that decrease between tests, may indicate odometer tampering — a criminal offence under the Consumer Protection from Unfair Trading Regulations 2008.

MOT Test Summary

SECTION 14 — TEST RECORD OVERVIEW

MOT STATISTICS	
Total Tests Recorded	6
Tests Passed	5
Tests Failed	1
Overall Pass Rate	83%
Total Advisory Items	4

Test Results Timeline

DATE	RESULT	MILEAGE	DEFECTS	ADVISORIES
2024-09-12	PASSED	67,432	0	2
2023-09-08	PASSED	54,210	0	1
2022-09-15	FAILED	41,005	2	1
2022-09-20	PASSED	41,020	0	0
2021-09-10	PASSED	28,300	0	1
2020-09-05	PASSED	15,200	0	0

Data Source: DVSA MOT History API — official UK Government data. Full details of each test, including all defects and advisories, are provided on the following pages.

MOT History Detail

TESTS 1 – 2 OF 6

Test 1 — 2024-09-12		PASSED
Test Number	594837261045	
Mileage	67,432 mi	
Expiry Date	2025-09-11	
Advisory Items:		
⚠ Front brake disc worn but not excessively (1.1.14)		
⚠ Nearside front tyre slightly worn on outer edge		

Test 2 — 2023-09-08		PASSED
Test Number	483726150934	
Mileage	54,210 mi	
Expiry Date	2024-09-07	
Advisory Items:		
⚠ Rear brake pads wearing thin but serviceable		

MOT History Detail

TESTS 3 – 4 OF 6

Test 3 — 2022-09-15

FAILED

Test Number	372615094837
Mileage	41,005 mi
Expiry Date	N/A

Failure Items:

X Offside headlamp aim too high (4.1.2)

X Nearside front position lamp not working (4.2.1a)

Advisory Items:

⚠ Front brake disc worn but not excessively (1.1.14)

Test 4 — 2022-09-20

PASSED

Test Number	372615094838
Mileage	41,020 mi
Expiry Date	2023-09-14

✓ No defects or advisories recorded for this test.

MOT History Detail

TESTS 5 – 6 OF 6

Test 5 — 2021-09-10

PASSED

Test Number	261509483726
Mileage	28,300 mi
Expiry Date	2022-09-09

Advisory Items:

⚠

Windscreen has minor damage but not in driver's direct line of vision

Test 6 — 2020-09-05

PASSED

Test Number	150948372615
Mileage	15,200 mi
Expiry Date	2021-09-04

✓

No defects or advisories recorded for this test.

Advisory Item Analysis

ITEMS REQUIRING ATTENTION

The following advisory items have been recorded across the vehicle's MOT history. Advisory items are not test failures but indicate components that may need attention in the near future. Addressing these items proactively can prevent future MOT failures and improve vehicle safety.

ADVISORY DESCRIPTION	FIRST RECORDED
⚠ Front brake disc worn but not excessively (1.1.14)	2022-09-15
⚠ Nearside front tyre slightly worn on outer edge	2024-09-12
⚠ Rear brake pads wearing thin but serviceable	2023-09-08
⚠ Windscreen has minor damage but not in driver's direct line of vision	2021-09-10

Note: Recurring advisories across multiple MOT tests may indicate a component that is gradually deteriorating and may eventually result in a test failure if not addressed.

Mechanical Condition Overview

MECHANICAL SYSTEMS GUIDE

A comprehensive mechanical assessment covers the key systems that affect the vehicle's performance, reliability, and safety. These include the engine, transmission, braking system, suspension, steering, exhaust system, cooling system, and electrical components.

Regular servicing in accordance with the manufacturer's recommended schedule is essential for maintaining the mechanical integrity of any vehicle. A complete service history provides confidence that the vehicle has been maintained to the required standard. Missing service records may indicate neglected maintenance, which can lead to premature component failure.

Engine

- Listen for unusual noises (knocking, tapping, whining)
- Check for oil leaks around gaskets and seals
- Inspect oil level and condition (should not be black or gritty)
- Look for blue or white smoke from the exhaust

Transmission

- Test all gears for smooth engagement
- Listen for grinding or crunching during gear changes
- Check clutch bite point (manual) or shift quality (automatic)
- Inspect for fluid leaks underneath the vehicle

Braking System

- Test brake response and pedal feel
- Check for pulling to one side under braking
- Inspect disc condition through wheel spokes
- Listen for squealing or grinding noises

Suspension & Steering

- Check for even tyre wear patterns
- Test for play in the steering wheel
- Listen for clunking over bumps
- Bounce each corner — should settle within 1-2 bounces

Safety Ratings & Recall Information

SAFETY & RECALL INFORMATION

Vehicle safety ratings are independently assessed by Euro NCAP (European New Car Assessment Programme), which tests vehicles across four categories: Adult Occupant Protection, Child Occupant Protection, Vulnerable Road User Protection, and Safety Assist features.

Manufacturer recalls are issued when a safety-related defect is identified that could pose a risk to the driver, passengers, or other road users. In the UK, the Driver and Vehicle Standards Agency (DVSA) maintains a register of all vehicle recalls. Recall work is carried out free of charge by authorised dealers.

How to Check for Outstanding Recalls

1. Visit <https://www.gov.uk/check-vehicle-recall>
2. Enter the vehicle make, model, and year
3. Review any outstanding recalls
4. Contact the manufacturer's dealer network to arrange rectification

Disclaimer: This report does not include a live recall check. Vehicle owners should periodically check for recalls through the DVSA website or contact their vehicle manufacturer directly.

Import / Export Status

VEHICLE ORIGIN & EXPORT MARKERS

IMPORT / EXPORT DATA	
Marked for Export	NO
Type Approval	M1
Last V5C Issued	2023-06-12

The import and export status of a vehicle is important for buyers to understand. A vehicle marked for export on the DVLA database has been flagged for removal from UK roads. Such vehicles should not be purchased for UK road use without first confirming the export marker has been removed.

Imported vehicles may have different specification levels, emissions standards, or safety features compared to UK-specification models. Previously imported vehicles should have appropriate type approval documentation. The V5C will typically note if a vehicle was first registered outside the UK.

Valuation Estimate & Market Guidance

MARKET VALUE GUIDANCE

Vehicle valuation is influenced by multiple factors including age, mileage, condition, service history, specification, and current market demand. The BMW 320D (2019) is approximately 7 years old at the time of this report.

For an accurate current market valuation, we recommend checking the following trusted sources which provide free or paid valuation tools:

Recommended Valuation Sources

Auto Trader	https://www.autotrader.co.uk/car-valuation	FREE
CAP HPI	https://www.cap-hpi.com/	INDUSTRY STANDARD
Parkers	https://www.parkers.co.uk/car-valuation/	FREE
What Car?	https://www.whatcar.com/car-valuation/	FREE
Glass's Guide	https://www.glass.co.uk/	TRADE

Key Factors Affecting Value

- Mileage — Lower mileage vehicles typically command higher prices
- Service History — Full manufacturer service history adds value
- Condition — Bodywork, interior, and mechanical condition
- Specification — Higher spec models (leather, sat nav, etc.) retain more value
- Colour — Popular colours (black, white, grey) are easier to sell
- Number of Previous Owners — Fewer owners is generally preferred
- MOT History — A clean MOT record indicates a well-maintained vehicle

Pre-Purchase Inspection Checklist

BUYER'S INSPECTION GUIDE

Use this checklist as a guide when physically inspecting the vehicle. Each item should be checked carefully before making a purchase decision.

Exterior

- ☐ Body panels aligned with consistent gaps
- ☐ No rust, bubbling, or filler on body panels
- ☐ All glass free from cracks and chips
- ☐ Headlights, tail lights, and indicators working
- ☐ Tyres in good condition with adequate tread (min 1.6mm legal)
- ☐ Alloy wheels free from kerb damage or cracks
- ☐ Number plates secure and legible

Interior

- ☐ Seats in good condition with no rips or excessive wear
- ☐ All seat belts retract and lock correctly
- ☐ Dashboard warning lights illuminate on ignition and extinguish after start
- ☐ Air conditioning blows cold
- ☐ Heater blows hot
- ☐ All windows operate (electric/manual)
- ☐ Central locking works on all doors
- ☐ Spare key available

Under the Bonnet

- ☐ Oil at correct level and clean condition
- ☐ Coolant at correct level (DO NOT open when hot)
- ☐ Brake fluid at correct level
- ☐ No visible leaks or damp patches
- ☐ Battery terminals clean and secure
- ☐ Belts and hoses in good condition

Test Drive

- ☐ Engine starts promptly without unusual noise
- ☐ Smooth gear changes (manual and automatic)
- ☐ No vibration at speed
- ☐ Brakes responsive with no pulling
- ☐ Steering straight and responsive
- ☐ No unusual noises from suspension over bumps
- ☐ Clutch engages smoothly (manual)

Documentation

- ☐ V5C (logbook) present and matches seller details
- ☐ Service history available (stamps or digital records)
- ☐ MOT certificate (if applicable)
- ☐ Previous MOT advisories addressed
- ☐ Warranty documentation (if applicable)
- ☐ Finance settlement letter (if previously financed)

Glossary of Terms

REFERENCE DEFINITIONS

V5C (Vehicle Registration Certificate)

The official document that records the registered keeper of a vehicle. It is NOT proof of ownership.

MOT (Ministry of Transport Test)

An annual test required for vehicles over 3 years old in the UK to ensure they meet minimum road safety and environmental standards.

VRM (Vehicle Registration Mark)

The unique combination of letters and numbers displayed on a vehicle's number plates.

VIN (Vehicle Identification Number)

A unique 17-character code assigned to every motor vehicle during manufacture. It can be found on the dashboard, door frame, or engine bay.

HPI Check

A comprehensive vehicle history check provided by HPI Ltd (now part of Cap HPI), which searches multiple databases for finance, theft, write-off, and mileage discrepancies.

SORN (Statutory Off Road Notification)

A declaration to the DVLA that a vehicle is not being used on public roads and does not require tax or insurance.

ULEZ (Ultra Low Emission Zone)

A designated area (e.g., London) where vehicles must meet strict emission standards or pay a daily charge.

Euro NCAP

The European New Car Assessment Programme — an independent organisation that crash-tests vehicles and assigns safety ratings from 1 to 5 stars.

Advisory (MOT)

An item noted during an MOT test that is not a failure but indicates a component that may need attention in the future.

PNC (Police National Computer)

A UK law enforcement database that holds records of stolen vehicles, among other criminal records.

MID (Motor Insurance Database)

A central database managed by the Motor Insurers' Bureau (MIB) containing records of all insured vehicles in the UK.

Category S / Category N

Insurance write-off categories. Category S = structural damage (repairable). Category N = non-structural damage (repairable). Both can be returned to the road after repair.

Report Summary & Disclaimer

FINAL NOTES

Report Overview

Report ID	VHR-20260717052836
Registration	AB12CDE
Vehicle	BMW 320D (2019)
Package	Premium
Date Generated	17 July 2026
Generated By	Vehicle History Reports

Summary of Findings

-  MOT: Valid
-  Tax: Taxed
-  Stolen Check: NO RECORD FOUND
-  Last Mileage: 67,432 miles

Disclaimer

This report has been compiled using data from official UK Government sources (DVLA and DVSA) and publicly available information. While every effort has been made to ensure accuracy, the information is provided "as is" without warranty of any kind, express or implied. This report does not constitute a guarantee of the vehicle's condition, history, or fitness for purpose.

Sections marked "Verification Recommended" use templated guidance text rather than live data checks. For definitive results on insurance write-off, finance, and stolen status, an accredited data provider such as HPI, Experian, or the AA should be consulted.

Vehicle History Reports accepts no liability for any loss, damage, or expense arising from reliance on the information contained in this report. A physical inspection by a qualified mechanic is always recommended before purchasing any used vehicle.
